

User Story

Story Id	#1
Story Name	Keeping track of homework, announcements and events given at school.
Description	<p>Murat is the principal of the Kocaeli branch of Şenay Duran Schools, a respected educational institution offering both primary and secondary education. In his school, communication between teachers and parents regarding homework and class announcements is currently managed through various channels such as WhatsApp, email, or personal phone numbers. This method, although functional, presents significant challenges. Teachers find it cumbersome, and for students and parents, especially those in primary school, it becomes a complex task to keep track of all the homework assignments and updates. Notably, parents of younger students struggle with noting down and following up on their children's homework.</p> <p>To address these challenges, Murat is planning to develop an innovative mobile student tracking system. His vision is for this system to be centrally managed through a web-based panel. This panel will empower Murat with various administrative capabilities. He'll be able to post announcements that will be accessible to users through the mobile application. The system will facilitate adding and updating the school's events calendar. Additionally, it will provide functionalities to add, update, or delete various entities such as lectures, classes, students, teachers, and parents associated with the school.</p> <p>The mobile application, designed as part of this system, will serve as a dynamic tool for teachers. Through the app, they will be able to easily view and manage the classes they are teaching. It will enable them to make class-specific announcements, assign homework, grade the assignments, and importantly, provide feedback to parents about their child's progress and homework. For students, this application will be a one-stop solution to view their homework assignments and any class announcements, ensuring they are always up-to-date with their academic responsibilities. Parents will benefit greatly from this system as well. The application will allow them to view their child's profile, track their academic progress, see announcements related to their child's classes, check homework results, and review the feedback provided by teachers. This comprehensive approach aims to streamline communication and enhance the educational experience for all stakeholders involved.</p>

- Scenario #1 - Admin can manage the system

Initial assumption	The administrator has one or more items to add to the system. This includes written information about the items to be added. Additionally, if there's a need to upload a photo, the photo is already saved on the administrator's computer. The administrator has successfully logged in to the admin panel.
Normal	The administrator navigates to the specific section relevant to the new information they wish to enter. For instance, they access the 'teacher adding area' to add a teacher, or the 'course adding area' to add a course. The required fields are filled in based on the information at hand. If necessary, the admin can select existing information such as teachers, students, courses, or classes from the system. To add a photo, the admin clicks the 'add photo' button, which opens a window where they can choose and upload the desired photo from their computer. Finally, the admin clicks the 'save' button to complete the process.
What can go wrong	There might be instances where necessary information like courses, teachers, and students, which must be selected from the system, are not available in the system. In such cases, these missing elements must be added to the system before proceeding with the main task.
Other activities	THERE IS NO OTHER ACTIVITIES
System state on completion	Upon completion, a notification message is displayed on screen. The newly added items become accessible and viewable through the mobile application. This ensures that the information or updates made by the admin are successfully integrated into the system.

- Scenario #2 - Teachers can add/delete/update homeworks and class announcements.

Initial assumption	A teacher intends to assign homework or make a class announcement. They have prepared the necessary information in writing, and if a photo is to be uploaded as part of the assignment or announcement, it's already saved on their phone. The teacher has successfully logged into the mobile application.
Normal	The teacher navigates to the 'My Classes' section from their profile and selects the class they wish to assign homework to or make an announcement for. Upon selecting a class, the specific class screen opens, where the teacher can choose to add either assignments or announcements. They press the 'add' button on this screen and fill in the required fields for the assignment or announcement. If a photo needs to be added, the teacher clicks the 'add photo' button. If they haven't previously granted the app permission to access their phone's files, a permission request window will pop up. After granting access or if it was already granted, the teacher can then add the photo. Once everything is in place, they save the assignment or announcement.
What can go wrong	If the teacher previously denied the application's request to access phone files, an error message will be displayed. In this scenario, the teacher must manually change the permission settings for the application in their phone's settings to allow file access.
Other activities	The teacher has the ability to edit the assignments or announcements they have created.
System state on completion	Upon completing the process, a notification message is displayed on the screen, confirming that the assignment or announcement has been saved. The assignment or announcement becomes viewable to all relevant parties using the application, ensuring that the teacher's input is effectively communicated to the students and possibly their parents.

- Scenario #3 - Parents and students can view homework and class announcements.

Initial assumption	The user, whether a student or a parent, has successfully logged into the application.
Normal	Students have the ability to access their homework and class announcements directly through their own profiles within the application. Similarly, parents can view their child's homework and class announcements by navigating to their student's profile. This information becomes visible to them upon selection. When reviewing homework, students can see their grades. Additionally, when parents are viewing homework, they also have the ability to see any comments or notes left by the teacher specifically for them.
What can go wrong	THERE IS NO TO GO WRONG
Other activities	THERE IS NO OTHER ACTIVITIES
System state on completion	Upon completion of these actions, there is no change in the system state. The application remains functional and accessible for users to view homework, grades, and announcements as needed.

User Requirements

Document status	USER REQUIREMENT

★ Actors

Name	Description
Teacher	It represents a teacher in a school. This teacher can teach a lesson to many different classes, and assignments are made by the institution depending on which classes they fall into, and while using the application, the teacher can do the following : He can log in to the mobile application with the username and password he received from the admin, change his password, assign homework that students and teachers can see, grade the homework, and make announcements that students and teachers can see. You can also follow the events and announcements shared by the institution.
Student:	A student is a student in a particular class of a school. Registration to the system is made by the institution and username and password information is provided. The student can do the following in the application: He can enter the mobile application with the username and password given by the institution, view the homework given by the teacher to the class and point that given by homeworks, view the announcements, and also view the events and announcements shared by the institution.
Parent	Parent is the parent of specific students in the School. The necessary registration, including information about which students are their parents, is made by the institution and the user name and password are given to the parents by the institution. What the parent can do in the application is as follows: The parent logs into the mobile application with his username and password. He can select any of his students and view which assignments were given to that student's class, how many points his student got from which assignment, and the announcements made by the teachers to that class. It can also view the events and announcements shared by the institution.
Admin	It represents one of the administrators at the school. The admin can register the students, teachers and parents of the students at the school through a website so that they can enter the mobile application. It can also make event sharing and announcements that all mobile application users can see.

Web Use Case Diagram

Mobile App Use Case Diagram

Detailed Use Case Tables

System	Admin Web Panel
Use Case	Register/Edit/Delete Classes
Actors	Admin
Data	Class details such as class name, schedule, assigned teacher, and student list.
Stimulus	An admin needs to create, modify, or remove a class in the system.
Response	The system processes the admin's request to add, update, or delete class information.
Comments	This functionality is critical for maintaining an accurate and up-to-date class schedule and enrollment.

System	Admin Web Panel
Use Case	Register/Edit/Delete Courses
Actors	Admin
Data	Course information including course title, description, credit hours, and prerequisites.
Stimulus	An admin intends to add new courses, update existing ones, or remove outdated courses from the system.
Response	The system updates the course offerings based on the admin's changes.
Comments	Course management must be flexible to reflect academic offerings each term.

System	Admin Web Panel
Use Case	Register/Edit/Delete Parents
Actors	Admin
Data	Parent profiles including names, contact details, associated students.
Stimulus	An admin needs to add, update, or delete parent profiles in the system.
Response	The system updates the database with the new or altered parent details, or removes them if needed.
Comments	This functionality allows for accurate tracking of student guardianship and contact information.

System	Admin Web Panel
Use Case	Register/Edit/Delete Students
Actors	Admin
Data	Student profiles including personal details, enrollment information, academic records.
Stimulus	An admin needs to create, modify, or remove student profiles.
Response	The system processes these changes and maintains an up-to-date record of all students.
Comments	Student data management is central to the system, requiring secure and precise operations.

System	Admin Web Panel
Use Case	Register/Edit/Delete Teachers
Actors	Admin
Data	Teacher profiles including qualifications, contact information, assigned classes.
Stimulus	An admin needs to add, update, or remove teacher information.
Response	The system updates teacher records and ensures that class assignments are current.
Comments	Managing teacher profiles is crucial for assigning classes and ensuring qualifications match course requirements.

System	Admin Web Panel
Use Case	Share/Edit/Delete General Announcements
Actors	Admin
Data	Announcement text, intended audience, date of announcement, expiry date.
Stimulus	An admin decides to post, update, or delete a general announcement.
Response	The system disseminates the announcements to the relevant parties and allows for subsequent edits or removal.
Comments	Announcements should be easily accessible and visible to the intended audience.

System	Mobile App
Use Case	Share/Edit/Delete Homework
Actors	Teacher
Data	Homework assignments, submission deadlines, relevant resources, student submissions.
Stimulus	A teacher assigns, updates, or removes homework for a class.
Response	The system updates the homework status and notifies students of the changes.
Comments	Homework management should facilitate both assigning and reviewing submissions.

System	Mobile App
Use Case	Share/Edit/Delete an Class Announcements
Actors	Teacher
Data	Announcement content, target class or classes, visibility settings.
Stimulus	A teacher needs to communicate information relevant to a particular class.
Response	The system posts the announcement to the specified class and allows for later edits or deletion.
Comments	Class-specific announcements must be timely and reach all students enrolled in the class.

System	Mobile App
Use Case	View Student Profile
Actors	Parent
Data	Student personal and academic information, including grades and attendance.
Stimulus	A teacher or parent wishes to view a student's academic profile.
Response	The system displays the student's profile with appropriate data based on the viewer's permissions.
Comments	Privacy controls are necessary to ensure sensitive information is only accessible to authorized users.

System	Mobile App
Use Case	View Events and General Announcements
Actors	Student, Teacher, Parent
Data	Information on upcoming events, general announcements for the school community.
Stimulus	Users want to stay informed about school activities and announcements.
Response	The system provides a feed of upcoming events and announcements to all users.
Comments	This feature keeps the school community engaged and informed of important dates and information.

System	Mobile App
Use Case	View Class Announcements
Actors	Student, Parent
Data	Announcements specific to the student's enrolled classes.
Stimulus	A student wants to check updates or information relevant to their classes.
Response	The system shows all recent and relevant class announcements to the student.
Comments	It is essential for students to have easy access to class-related updates to stay on track with their courses.

System	Mobile App
Use Case	View/Edit Own Profile
Actors	Student, Teacher
Data	Profile information such as personal details, contact information, academic records.
Stimulus	A user accesses their profile to view or make changes.
Response	The system displays the user profile and saves any changes made by the user.
Comments	Users should have control over their profile information with privacy settings in place.

System	Mobile App
Use Case	Review Homework of Their Children with Note
Actors	Parent
Data	Child's homework details, teacher's notes, grades.
Stimulus	A parent wants to review their child's homework performance and notes from the teacher.
Response	The system provides access to detailed homework information and teacher feedback.
Comments	This feature strengthens the home-school connection by keeping parents informed.

Our context model consists of **only one system** which is Student Tracking System. We did not use any external system to develop our program. Everything related to API calls, database managements are within the system.

<<system>>
Student
Tracking
System

Process Models

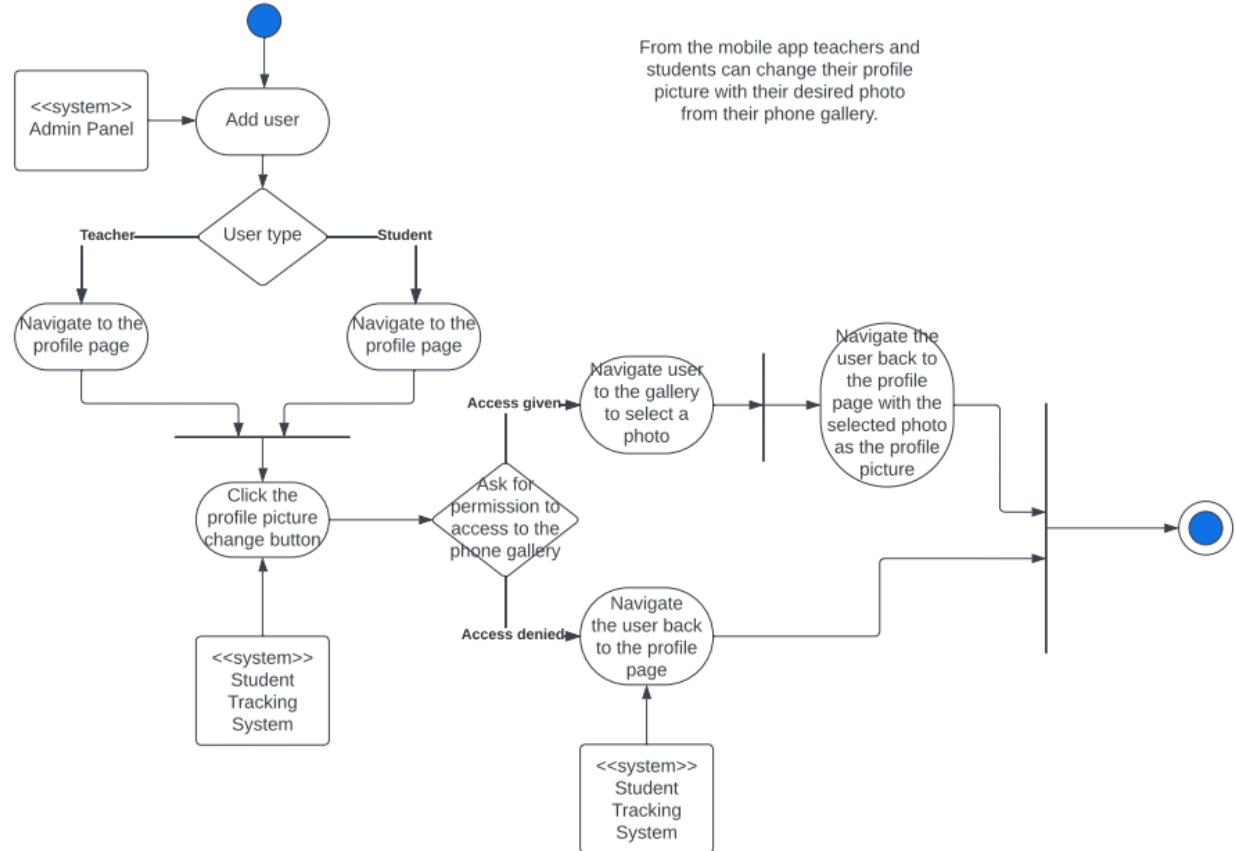

Making class announcement

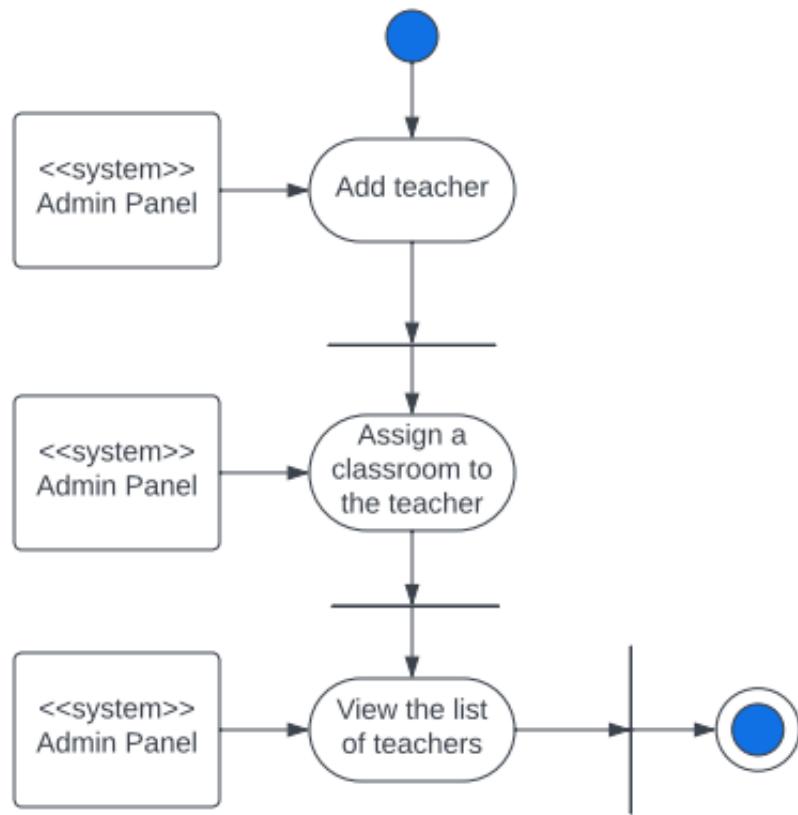

From admin panel a teacher can be added to the system and from the mobile app teacher will login to the system. Later he/she can make an announcement to a classroom. Once an announcement has been made a notification will be send to all users in that classroom. Parents and students can view the details of the announcement from their mobile app.

Changing profile picture

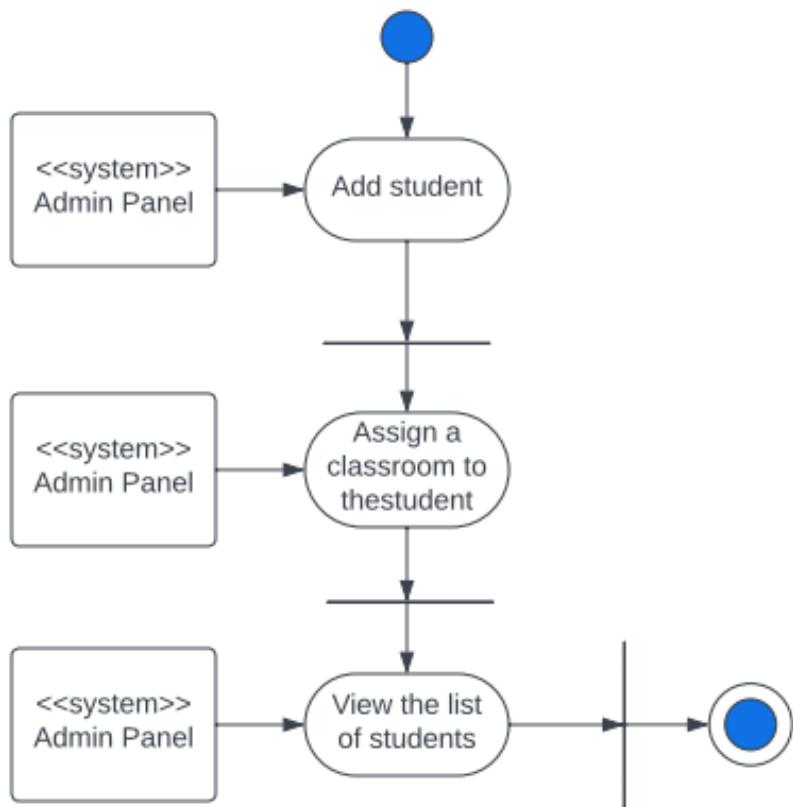

Adding teacher to the system

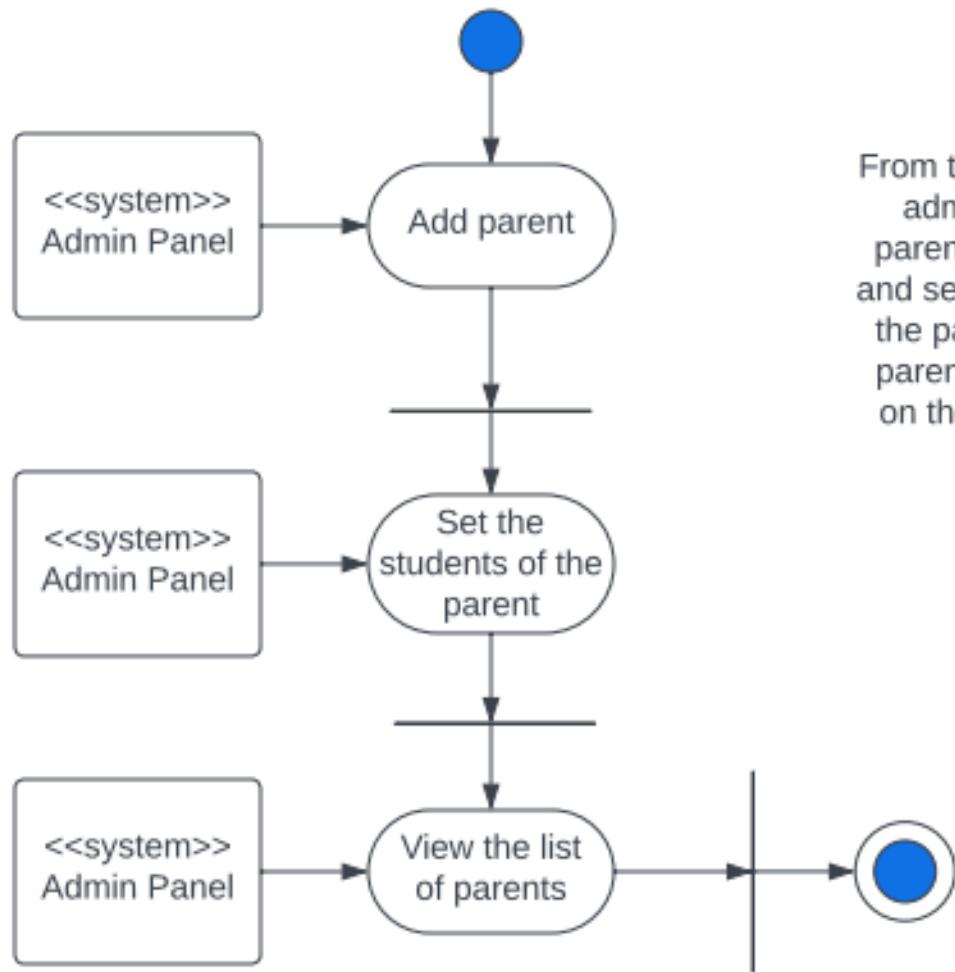

From the admin panel, admin can add a teacher to the system and assign a classroom to that teacher. Later the teacher will be listed on the admin panel.

Adding student to the system

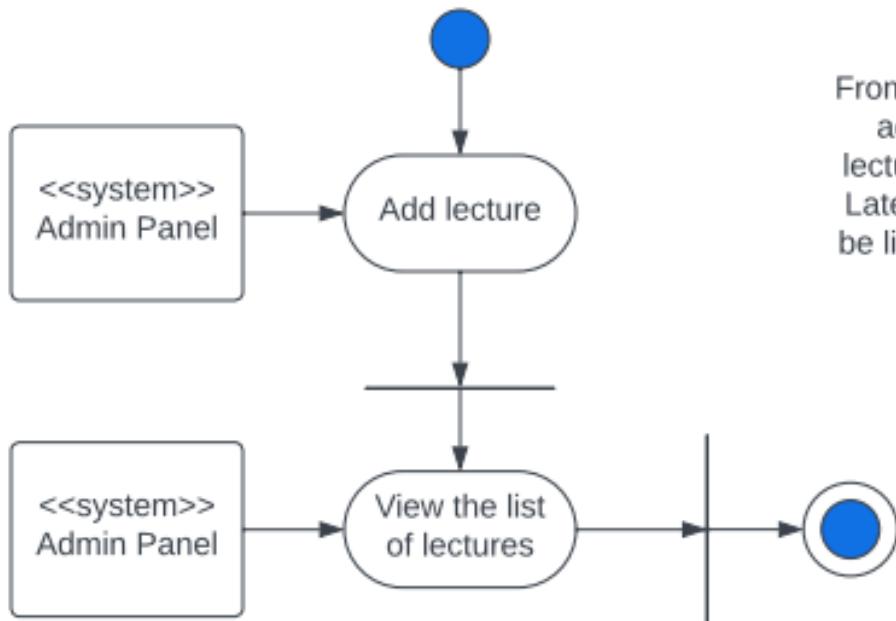

From the admin panel, admin can add a student to the system and assign a classroom to that student. Later the students will be listed on the admin panel.

Adding parent to the system

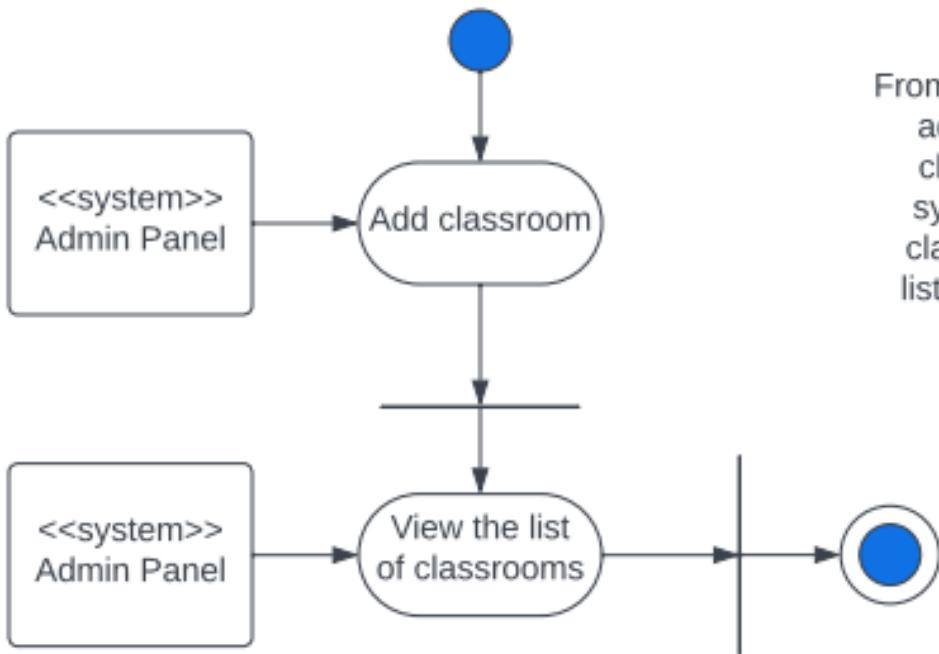

From the admin panel, admin can add a parent to the system and set the students of the parent. Later the parents will be listed on the admin panel.

Adding lecture to the system

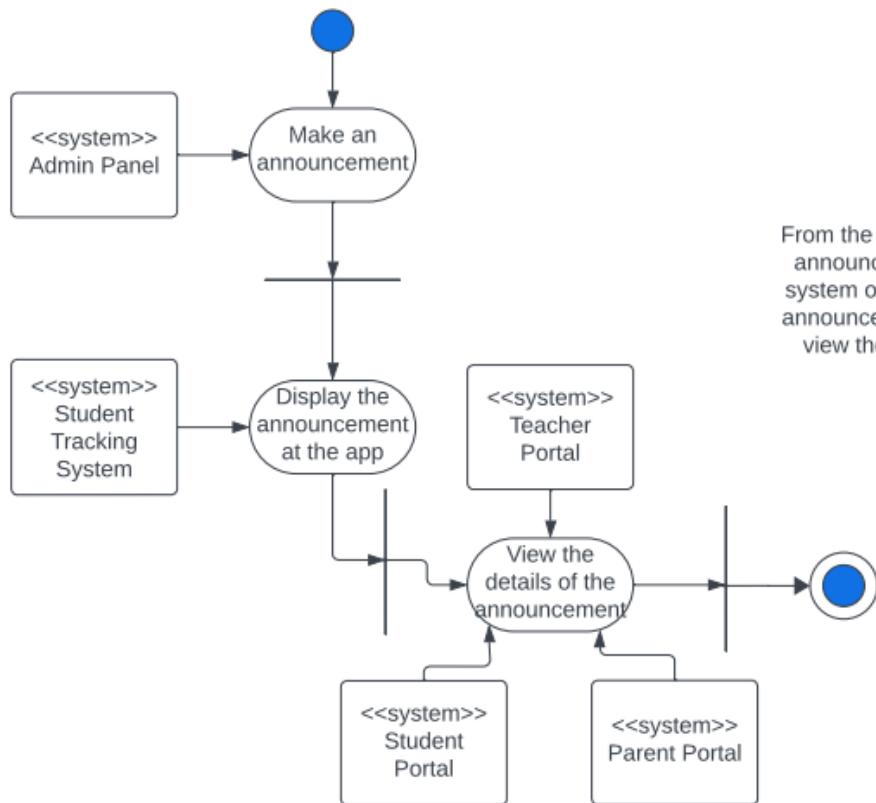

From the admin panel, admin can add a lecture to the system. Later the lectures will be listed on the admin panel.

Adding classroom to the system

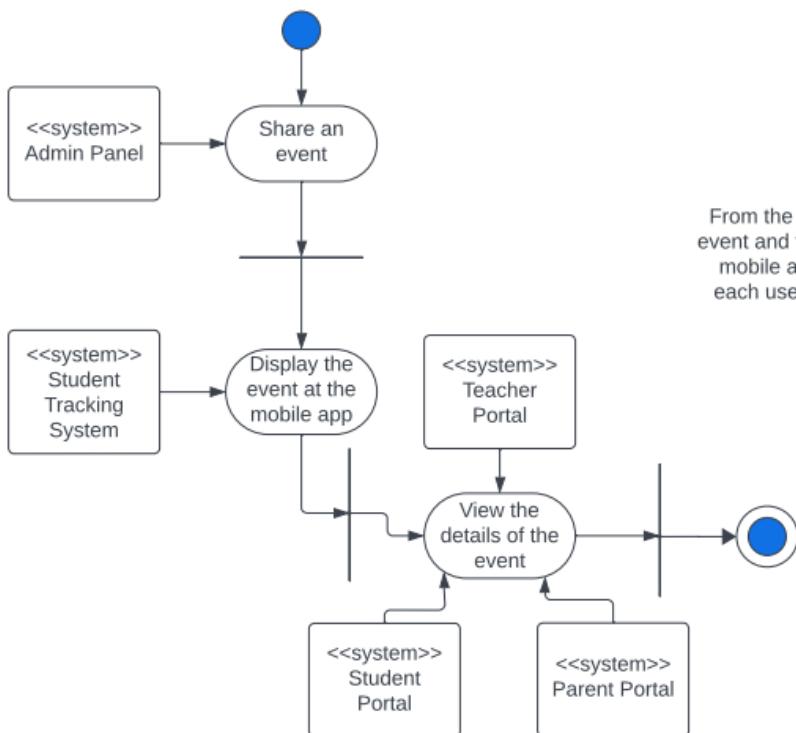

From the admin panel, admin can add a classroom to the system. Later the classrooms will be listed on the admin panel.

Making an announcement

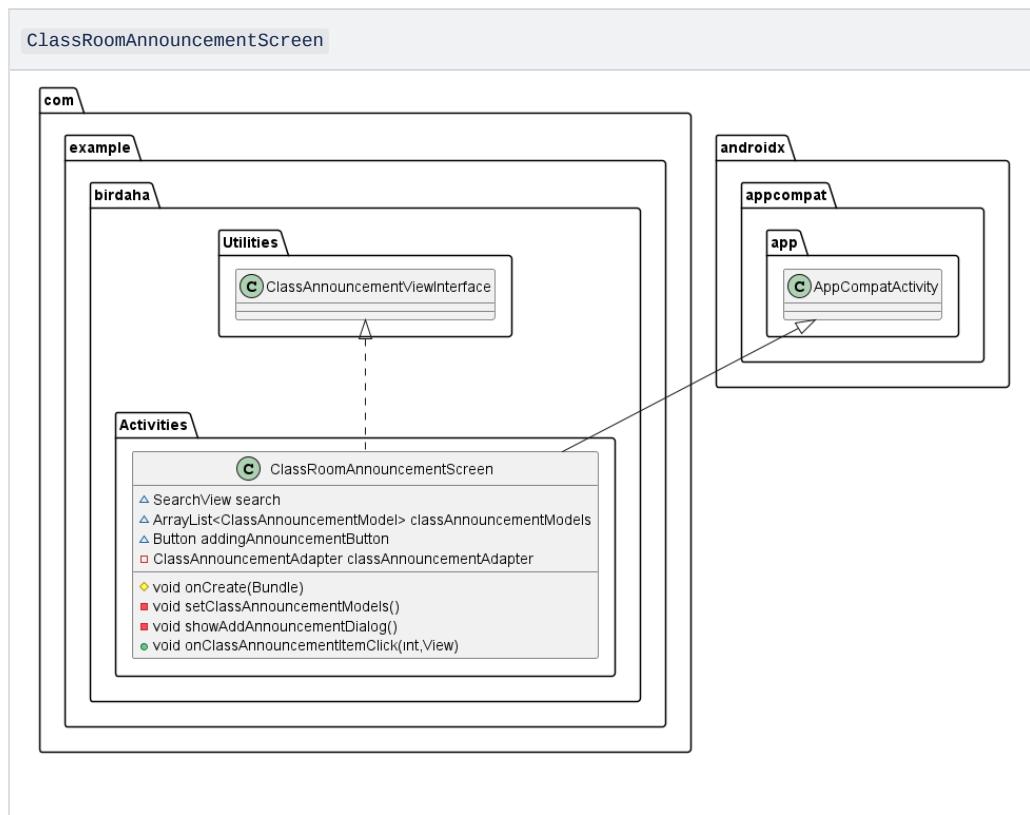

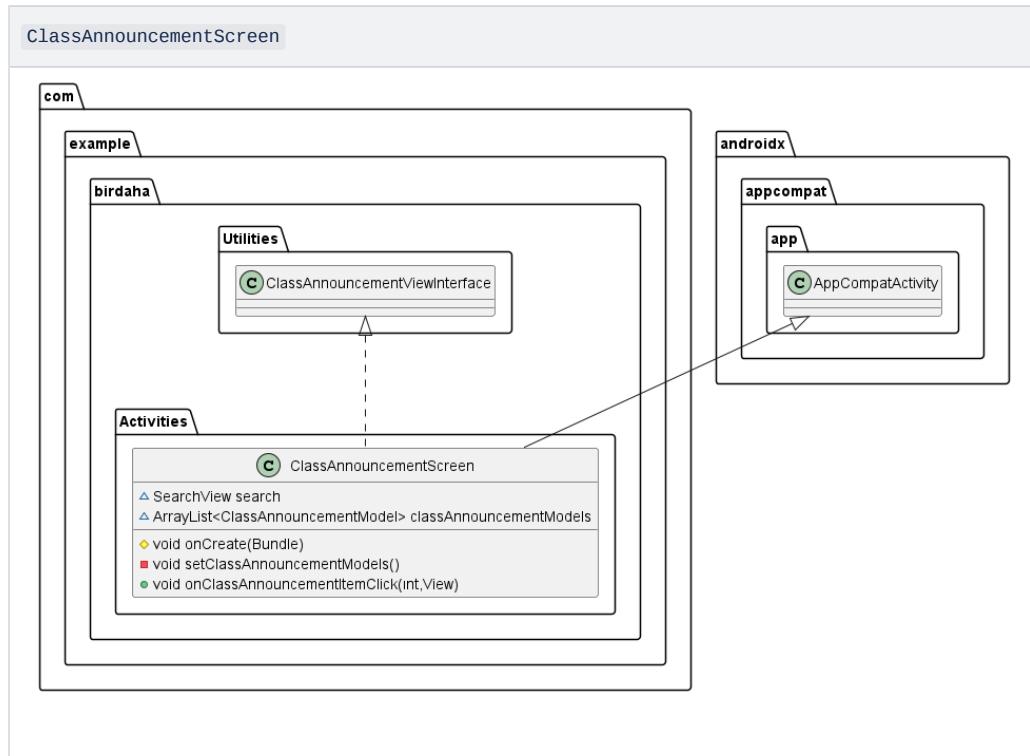

From the admin panel admin can make an announcement and the student tracking system on the mobile app can display the announcement so that each user type can view the details of the announcement.

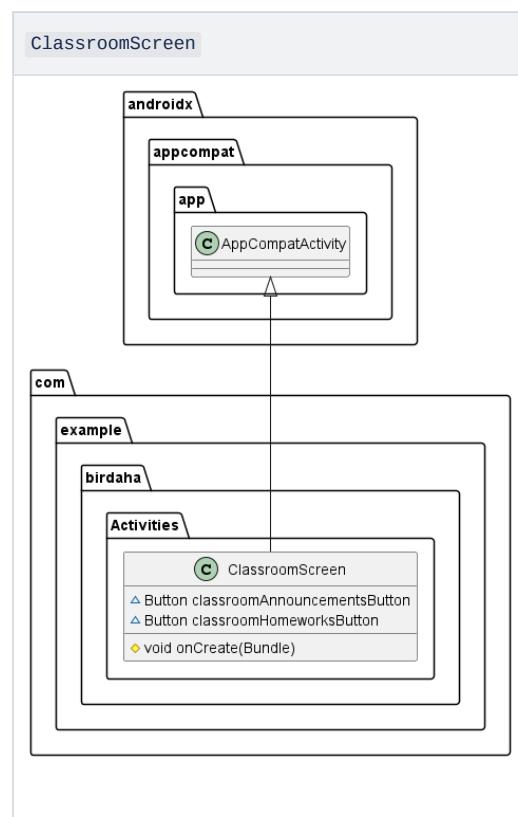

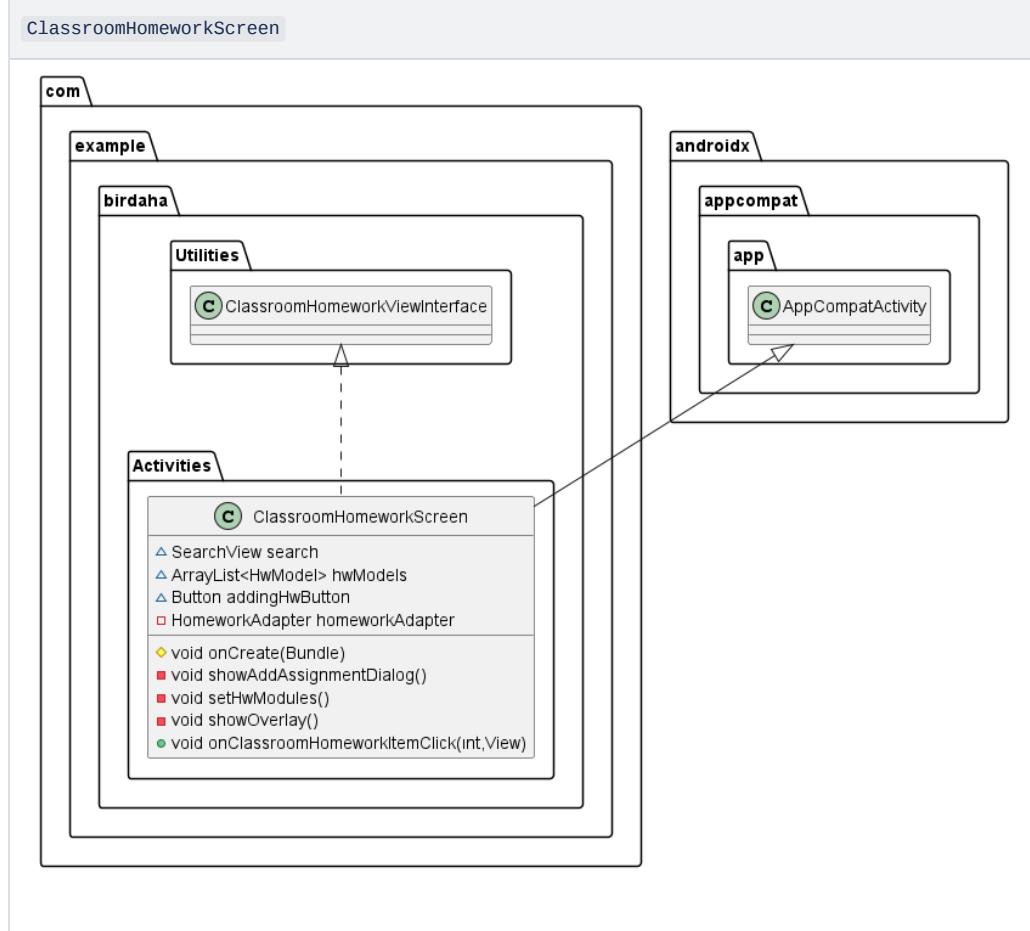

Sharing an event

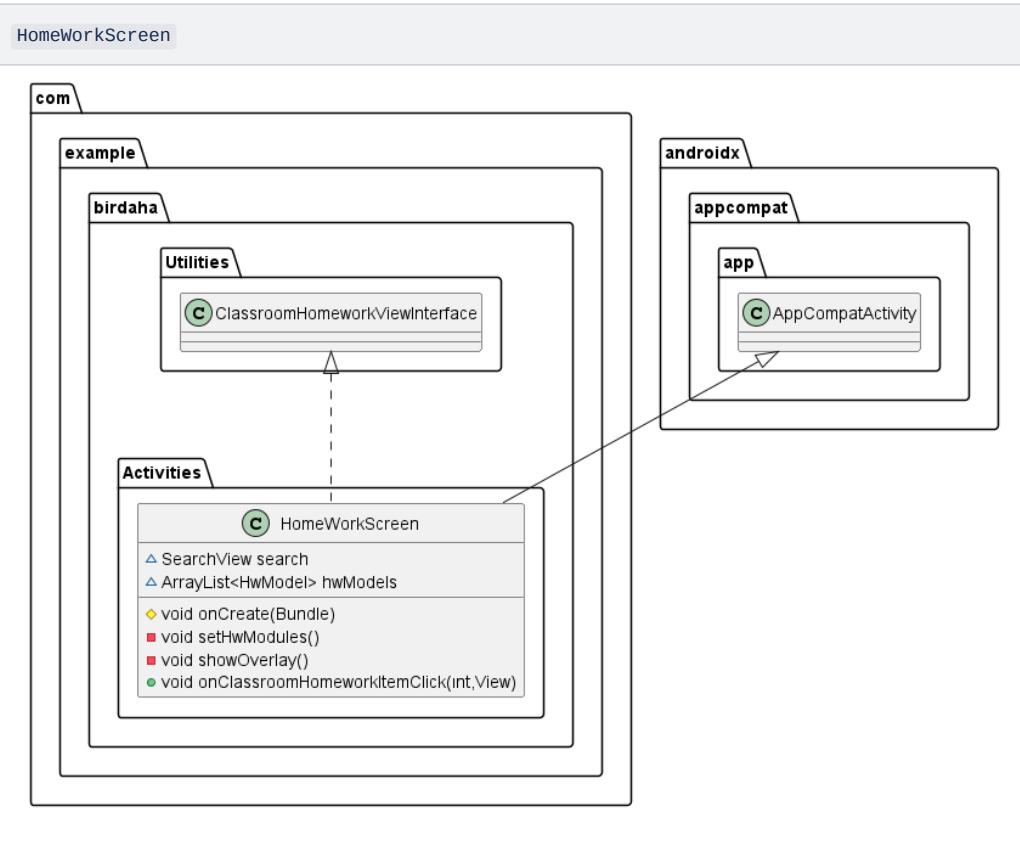

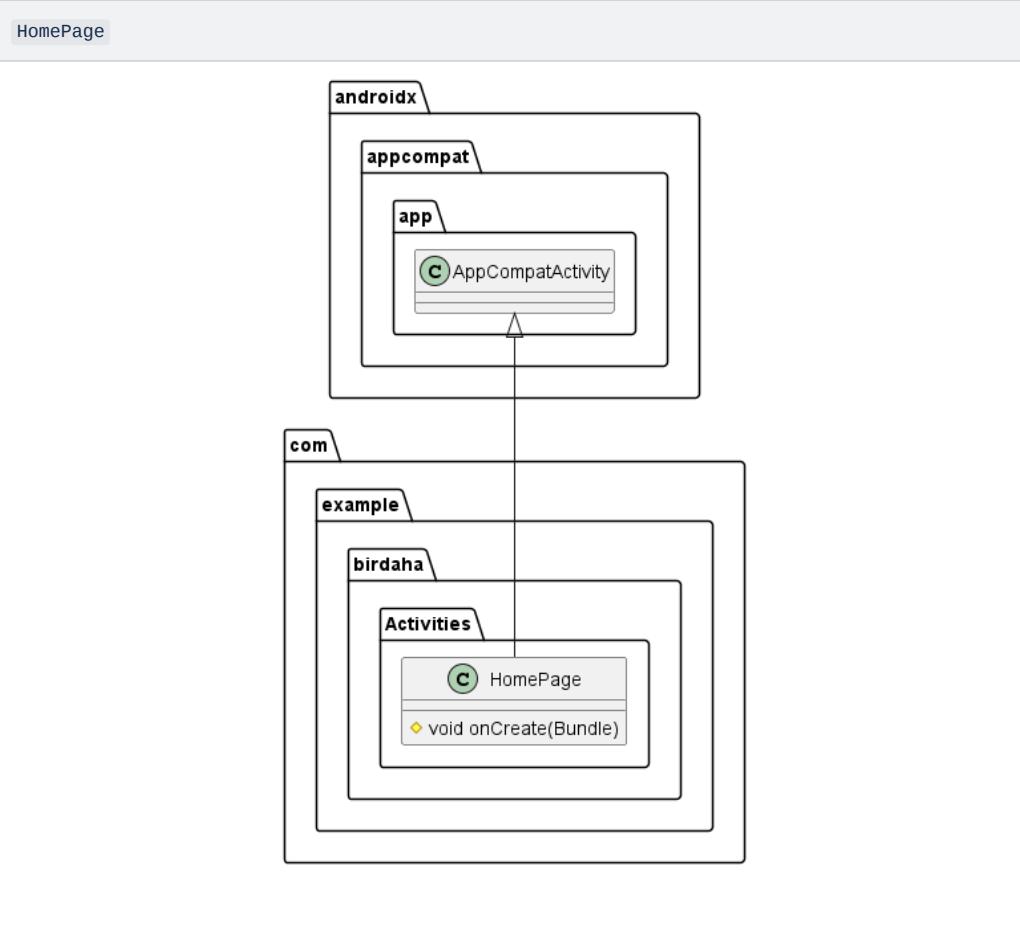

From the admin panel admin can share an event and the student tracking system on the mobile app can display the event so that each user type can view the details of the events.

Mobile Adding Homework

ID	AddHomeworkDialog-1
Result	DONE / UNDONE
Description	This test case verifies that the 'Add Homework' dialog in the mobile app correctly captures input for homework name, course name, due date, and homework content.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User is logged into the app.
2	User navigates to the 'Homework' section.

Step #	Test Data Requirements
1	'Add Homework' AlertDialog with input fields for homework name, course name, due date, and homework content.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Open the app, navigate to the 'Homework' section and tap on the 'Add Homework' button.	'Add Homework' dialog appears with input fields for homework name, course name, due date, and homework content.	Dialog captures the data and displays a confirmation message or updates the homework list.	PASS
2	Enter valid data into each input field and submit the dialog.	Dialog captures the data and displays a confirmation message or updates the homework list.	Dialog captures the data and displays a confirmation message or updates the homework list.	PASS

Mobile Announcement Page Recyclerview

ID	AnnouncementRecyclerView-1
Result	DONE
Description	This test case aims to verify that the RecyclerView on the announcement page of the mobile app accurately and efficiently displays a list of announcements, supports user interaction, and updates the content when necessary.
Created By	
Test Date	Nov 17, 2023

Step #	Prerequisites	Step #	Test Data Requirements
1	User is logged into the app.	1	Multiple announcements with varied details such as titles, content, target audiences, and posting dates.
2	User has navigated to the 'Announcements' page, which displays announcements in a RecyclerView.		

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Check the initial loading of the RecyclerView on the announcement page.	The RecyclerView displays a list of announcements correctly and completely.	The list of announcements loaded successfully with all relevant details visible.	PASS
2	Scroll through the announcements list.	The RecyclerView allows smooth scrolling, and all items are properly formatted.	Smooth scrolling achieved; each announcement item remained well-formatted.	PASS
3	Tap on an announcement to view details.	The app responds by opening the detailed view of the selected announcement.	Selecting an announcement navigated to its detailed view accurately.	PASS

4	Return to the announcement list and perform a pull-to-refresh action.	The RecyclerView refreshes, showing any new or updated announcements.	After refreshing, new announcements appeared, and updates were reflected.	PASS
5	Test the RecyclerView's performance with a high volume of announcements.	The RecyclerView efficiently handles a large list without performance degradation.	Even with a high number of announcements, the RecyclerView functioned without lag or crashes.	PASS

Mobile Announcement Page Search Bar

ID	AnnouncementearchBar-1
Result	DONE
Description	This test case aims to verify the functionality of the search bar on the announcement page of the mobile app. It focuses on the search bar's ability to accurately filter and display announcements based on the user's input, such as keywords from the announcement title or content.
Created By	
Test Date	Nov 17, 2023

Step #	Prerequisites	Step #	Test Data Requirements
1	User is logged into the app.	1	A variety of announcements with distinct titles.
2	User navigates to the 'Announcements' page, which contains multiple announcements.		

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Type a specific keyword related to an announcement title in the search bar.	Only announcements with titles containing the keyword are displayed.	Announcements matching the keyword in their titles appeared accurately.	PASS
2	Clear the search bar and enter an irrelevant or non-existent keyword.	No results are displayed, or a message indicating no matches is shown.	No announcements appeared.	PASS
3	Enter a partial keyword and check for partial matches.	Announcements containing partial matches of the keyword are displayed.	Partial keyword search successfully brought up relevant announcements.	PASS

Mobile Classroom Page Announcements Button

ID	AnnouncementsButtonClassroomScreen-1
Result	DONE
Description	This test case aims to verify that the "Announcements" button on the classroom screen of the mobile app effectively navigates users to the announcements page, where they can view, create, or interact with announcements.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites	Step #	Test Data Requirements
1	User is logged into the app.	1	A clearly visible and accessible "Announcements" button on the classroom screen.
2	User is on the classroom screen which contains the "Announcements" button.		

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Tap on the "Announcements" button on the classroom screen.	The button should be easily identifiable and responsive to touch.	The "Announcements" button was easily found and responded immediately to touch.	PASS
2	Observe the navigation process from the classroom screen to the announcements page.	Smooth and error-free transition to the announcements page.	Navigation to the announcements page was smooth and without any errors.	PASS
3	Verify the content displayed on the announcements page.	The page should display current announcements or options to view/create announcements.	The announcements page correctly displayed current announcements and options for interaction.	PASS

Mobile Classroom Page Homeworks Button

ID	HomeworkButtonClassroomScreen-1
Result	DONE
Description	This test case aims to verify that the "Homework" button on the classroom screen of the mobile app functions correctly, allowing users to navigate seamlessly to the homework page where they can view, add, or modify homework assignments.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites	Step #	Test Data Requirements
1	User is logged into the app.	1	A visible and accessible "Homework" button on the classroom screen.
2	User has navigated to the classroom screen which contains the "Homework" button.		

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Locate and tap on the "Homework" button on the classroom screen.	The button should be easily locatable and responsive to user interaction.	The "Homework" button was prominently displayed and responsive when tapped.	PASS
2	Observe the transition from the classroom screen to the homework page after tapping the button.	The app should navigate smoothly to the homework page without delays or errors.	Smooth transition to the homework page was observed with no noticeable delays.	PASS
3	Verify the content on the homework page post-navigation.	The homework page should display relevant homework assignments or options to add/view homework.	The homework page displayed a list of assignments and options to add or view more details.	PASS
4	Test the button functionality	The button should consistently	Consistent performance	PASS

	multiple times to check consistency.	provide reliable navigation to the homework page on repeated attempts.	observed in multiple tests, reliably navigating to the homework page each time.	
5	Test the button's functionality under different network conditions.	The button should work properly regardless of network strength, indicating proper error handling and feedback mechanisms.	The button functioned correctly under various network conditions, with appropriate error messages in case of network issues.	PASS

Mobile Editing Homework

ID	EditHomeworkOverlay-1
Result	DONE
Description	This test case assesses the functionality of the "Save" and "Edit" buttons within a "Homework" overlay in a mobile app. It checks whether these buttons allow for effective editing and saving of homework details.
Created By	
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User is logged into the app.
2	User has navigated to a section where they can open a "Homework" overlay.

Step #	Test Data Requirements
1	A "Homework" overlay with editable fields and "Save" and "Edit" buttons at the bottom.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Open a "Homework" overlay and observe the initial state of the "Save" and "Edit" buttons.	The "Edit" button should be enabled, while the "Save" button may be disabled or enabled based on the initial state of the overlay.	"Edit" button was enabled; "Save" button was initially disabled.	PASS
2	Tap on the "Edit" button and make changes to the homework details.	Editing mode should be enabled, allowing changes to be made. The "Save" button should become active/enabled after changes are made.	Editing mode activated; changes were made, and the "Save" button became active.	PASS
3	After editing, tap the "Save" button.	The app should save the changes and possibly close the overlay or provide a confirmation message.	Changes were saved, and a confirmation message appeared. Overlay	PASS

		confirmation message.	remained open for further actions.	
4	Reopen the "Homework" overlay to check if the changes are retained.	The previously saved changes should be visible when reopening the overlay.	Upon reopening, all saved changes were correctly displayed.	PASS
5	Test the functionality with various types of edits and multiple times to ensure consistency.	The "Save" and "Edit" buttons should consistently allow for changes and save them accurately across multiple tests.	Consistent performance observed in multiple tests with various edits. All changes saved correctly.	PASS

Mobile ExpandableListView

ID	Mobile ExpandableListView-1
Result	DONE
Description	This test case aims to verify that the 'My Students' list in the mobile app expands to show a list of students and that selecting a student navigates to their profile.
Created By	@Mete Ahmet Yakar
Test Date	Nov 18, 2023

Step #	Prerequisites
1	User is logged in to the app.
2	User has access to 'My Students' list.
3	'My Students' list contains at least one student.

Step #	Test Data Requirements
1	'My Students' ExpandableListView with populated student data.

Test Scenario

Verify the ExpandableListView functionality in the 'My Students' list and subsequent navigation to student profiles.

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Open the app and navigate to the 'My Students' list. Then Tap on the 'My Students' list to expand it.	'My Students' list expands to show student names correctly.	'My Students' list expands to show student names correctly.	PASS
2	Select a student from the list.	Navigates to the profile page of the selected student.	Navigates to the profile page of the selected student.	PASS

Mobile Homework Page RecyclerView

ID	HomeworkRecyclerView-1
Result	DONE
Description	This test case verifies the functionality of the RecyclerView on the homework page of the mobile app. It checks whether the RecyclerView correctly displays, scrolls, and refreshes the list of homework assignments.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User is logged into the app.
2	User navigates to the 'Homework' page, which contains multiple homework assignments displayed in a RecyclerView.

Step #	Test Data Requirements
1	Multiple homework assignments with varied details like names, course names, due dates, and content.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Observe the initial loading of the RecyclerView on the homework page.	The RecyclerView displays a list of homework assignments correctly.	The list of assignments loaded correctly with all details visible.	PASS
2	Scroll through the list of homework assignments.	The RecyclerView scrolls smoothly, and all items remain correctly formatted.	Scrolling was smooth, and all homework items were displayed without any formatting issues.	PASS
3	Select a homework assignment by tapping on it.	The app responds to the selection and navigates to the detailed view of the selected homework.	Tapping on an assignment correctly navigated to its detailed view.	PASS
4	Return to the homework list and refresh the page.	The RecyclerView updates and reflects any changes.	After refreshing, the list updated to show any recent changes.	PASS

		changes made to the homework list.		
5	Test responsiveness of the RecyclerView with a large number of homework assignments.	The RecyclerView handles a large list without lagging or crashing.	Even with a large list, the RecyclerView functioned smoothly without any performance issues.	PASS

Mobile Homework Page Search Bar

ID	HomeworkSearch-1
Result	DONE
Description	This test case verifies that the search bar in the homework page of the mobile app accurately filters and displays homework assignments based on the entered search criteria homework name.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User is logged into the app.
2	User has navigated to the 'Homework' page which contains multiple homework assignments.

Step #	Test Data Requirements
1	Homework assignments with homework names.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Type a specific homework name in the search bar.	Only homework assignments with matching names are displayed.	All assignments with the searched name appeared correctly.	PASS
2	Clear the search bar and enter a non-existent homework name.	No results are displayed, or a message indicating no matches is shown.	No assignments appeared, and a 'No results found' message was displayed.	PASS

Mobile Login Test Case-1

ID	MobileLogin-1
Result	DONE
Description	Identify the user from the entered username and login the user to the application.
Created By	@Burak Demirkaya
Test Date	Nov 17, 2023

Step #	Prerequisites	Step #	Test Data Requirements
1	A mobile application with a login page that contains two text fields for username and password.	1	Username
		2	Password
		3	Wrong username or password
		4	Leaving one of the fields empty

Test Scenario

The user enters his/her username and password on the mobile app login page.

Step #	Step Details	Expected Results	Actual Results	Test Result
1	User enters his/her username starting with the letter 'S'.	Identify the user as student and navigate the user to the main page.	Identify the user as student and navigate the user to the main page.	PASS
2	User enters his/her nickname starting with the letter 'T'.	Identify the user as teacher and navigate the user to the main page.	Identify the user as teacher and navigate the user to the main page.	PASS
3	User enters his/her nickname starting with the letter 'P'.	Identify the user as parent and navigate the user to the main page.	Identify the user as parent and navigate the user to the main page.	PASS
4	User leaves one of the fields empty.	Show error message and wait for the user to fill the empty fields.	Show error message and wait for the user to fill the empty fields.	PASS
5	User enters his/her nickname or password wrong.	Show error message and notify the user to enter the correct nickname or password.	Show error message and notify the user to enter the correct nickname or password.	PASS

Mobile Sidemenu

ID	MobileSidemenu-1
Result	DONE
Description	This test suite validates the functionality and navigation of buttons in the mobile app's side menu. Test cases cover 'Home,' 'Profile,' 'Notifications,' and 'My Students' (for parent profiles). Tests involve app launch, side menu access, button interaction, and screen navigation verification. The goal is to ensure a seamless user experience while using the side menu.
Created By	@Mete Ahmet Yakar
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User is logged into the mobile app.

Step #	Test Data Requirements
1	Home button
2	Profile button
3	Notifications button
4	My Students button (Only for parents)

Test Scenario

User navigates and interacts with the side menu in the mobile app.

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Tap the side menu icon then select the 'Home' button.	App navigates to the home screen.	App navigates to the home screen.	PASS
2	Tap the side menu icon then select the 'Profile' button.	User's profile page is displayed.	User's profile page is displayed.	PASS
3	Tap the side menu icon then select the 'My Students' button.	Expand list opens	Expand list opens	PASS
4	Tap the side menu icon then select the 'Notifications' button.	Notifications area appears.	Notifications area appears.	PASS

Mobile Student Page Adding Profile Photo

ID	AddProfilePhotoStudent-1
Result	DONE
Description	This test case verifies the process of adding a profile photo to a student's profile in a mobile app, including obtaining the necessary permissions to access the phone's gallery.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User (student) is logged into the app.
2	User is on their profile page with an option to add or change a profile photo.

Step #	Test Data Requirements
1	Option to add or change a profile photo on the student's profile page.
2	Access to the phone's gallery with images available for selection.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Tap on the option to add or change a profile photo on the student's profile.	If gallery permissions are not already granted, a permission request prompt should appear.	Permission request prompt appeared as this was the first gallery access attempt.	PASS
2	Grant permission to access the gallery.	The app should be granted access to the gallery without any issues.	Permission was granted successfully, allowing the app to access the gallery.	PASS
3	Select an image from the gallery to set as the profile photo.	The selected image should be previewed before confirming it as a profile photo.	The selected image was previewed successfully for confirmation.	PASS
4	Confirm the selection and update the profile photo.	The student's profile should be updated with the	The profile photo was updated and displayed	PASS

		new photo, displayed correctly.	accurately on the student's profile.	
5	Revisit the profile photo update option to check if permission is asked again.	The app should remember the granted permissions and not ask for them again during subsequent accesses.	No additional permission prompt on subsequent access; the app remembered the granted permissions.	PASS

Mobile Student Profile Homeworks Button

ID	HomeworkButtonStudentProfile-1
Result	DONE
Description	This test case aims to verify that the "Homework" button on the student profile of the mobile app functions correctly, allowing students to navigate seamlessly to the homework page where they can view homework assignments
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites	Step #	Test Data Requirements
1	User is logged into the app.	1	A visible and accessible "Homework" button on the student profile.
2	User has navigated to the student profile which contains the "Homework" button.		

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Locate and tap on the "Homework" button on the student profile.	The button should be easily locatable and responsive to user interaction.	The "Homework" button was prominently displayed and responsive when tapped.	PASS
2	Observe the transition from the student profile to the homework page after tapping the button.	The app should navigate smoothly to the homework page without delays or errors.	Smooth transition to the homework page was observed with no noticeable delays.	PASS
3	Verify the content on the homework page post-navigation.	The homework page should display relevant homework assignments or view homework.	The homework page displayed a list of assignments and view more details.	PASS

Mobile Teacher Profile Adding Profile Photo

ID	AddProfilePhotoTeacher-1
Result	DONE
Description	This test case assesses the process of adding a profile photo to a teacher's profile within a mobile app. It includes steps for granting permission to access the gallery, as the user is a teacher.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User (teacher) is logged into the app.
2	User is on their profile page with an option to add or change a profile photo.

Step #	Test Data Requirements
1	Functionality to add or change a profile photo on the teacher's profile page.
2	Access to the phone's gallery with suitable images for a profile photo.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Tap on the option to add or change a profile photo on the teacher's profile page.	A prompt for gallery access permission should appear if permissions are not already granted.	Permission request prompt displayed correctly as it was the first time accessing the gallery.	PASS
2	Grant permission to access the gallery.	The app should access the gallery without any issues after permission is granted.	Gallery access granted successfully, with the app displaying available images.	PASS
3	Select a suitable image from the gallery for the profile photo.	The selected image should be previewed before finalizing as the profile photo.	Preview of the selected image was displayed appropriately for confirmation.	PASS
4	Confirm the selection and update the profile photo.	The teacher's profile photo should be updated and displayed	The profile photo was updated successfully and appeared	PASS

		correctly on the profile.	accurately on the teacher's profile.	
5	Revisit the photo update feature to verify if permissions are requested again.	The app should not ask for gallery access permissions again, showing proper handling of permissions.	No repeat permission request; the app retained the permission settings from the first access.	PASS

Mobile Teacher Profile Classes Button

ID	ClassesButtonTeacherProfile-1
Result	DONE
Description	This test case verifies the functionality of the "Classes" button on a teacher's profile page in the mobile app. It checks whether the button opens an overlay for class selection and if the selection correctly navigates to the chosen class's page.
Created By	@Kubilay yazman
Test Date	Nov 17, 2023

Step #	Prerequisites
1	User (teacher) is logged into the app.
2	User is on their profile page with the "Classes" button visible.

Step #	Test Data Requirements
1	A functional "Classes" button on the teacher's profile page.
2	An overlay with a list of classes that the teacher is associated with.

Test Scenario

Step #	Step Details	Expected Results	Actual Results	Test Result
1	Tap on the "Classes" button on the teacher's profile page.	An overlay should appear, displaying a list of classes the teacher is associated with.	Overlay opened successfully, showing a list of classes.	PASS
2	Observe the layout and functionality of the class selection overlay.	The overlay should be well-organized and each class should be selectable.	The overlay was clear and user-friendly, with each class easily selectable.	PASS
3	Select a class from the overlay.	The app should navigate to the selected class's page.	Navigated correctly to the chosen class's page with relevant class details.	PASS
4	Test the button and overlay with multiple classes to check consistency.	Consistent and reliable navigation to each selected class's page on multiple attempts.	Consistently navigated to the correct class's page on multiple selections.	PASS

5	Check the response of the app when returning to the teacher's profile and selecting another class.	The app should allow multiple selections from the overlay without errors or delays.	Multiple selections were handled smoothly without any errors or delays.	PASS
